## WORKSHOP OUTLINE

### WORKSHOP OVERVIEW

Building upon the success of the previous two editions of the Decision-Based Integrated Reservoir Modeling workshop, we proudly announce the third edition, focusing on leveraging Artificial Intelligence (AI) and Machine Learning (ML) innovations to revolutionize reservoir modeling under the umbrella of Decision-Based Modeling (DBM). Ultimately, our objective is to realize a Live Earth Model (LEM), a dynamic, data-integrated representation of the subsurface that synchronizes seamlessly with real-time updates from diverse data sources.

We'll explore cutting-edge AI and ML methodologies, including deep learning and physics-informed neural networks, and their practical applications in reservoir modeling, underscoring how these innovations can enhance Decision-Based Modeling (DBM) workflows and drive progress toward realizing the Live Earth Model (LEM). Furthermore, we'll analyze strategies for integrating diverse datasets, encompassing seismic data, well logs, core analyses, production data, and geological interpretations, to construct comprehensive and predictive reservoir models. Moreover, we'll delve into the realms of uncertainty quantification and risk probabilities in the context of reservoir modeling. Notably, we'll also address the critical role of DBM in supporting sustainable practices, particularly in the realm of Carbon Capture and Storage (CCS), where precise characterization of subsurface formations is essential for secure and efficient CO2 sequestration. The workshop will additionally cover the application of DBM techniques in geothermal energy exploration and mineral resource prospecting.

### BENEFITS OF ATTENDING

Participants can look forward to a packed schedule consisting of keynote addresses, engaging oral presentations, and poster sessions by renowned industry and academia experts. Real-world examples showcased throughout the workshop will illustrate the effective application of cutting-edge reservoir modeling technologies and robust multidisciplinary data integration, leading to successful accomplishments in field development. Some key topic categories include:

- > Enhancing Reservoir Modeling through Artificial Intelligence and Machine Learning Applications.
- > Decision-based Modeling: Current Developments and Future Trends.
- > Real-time Joint Static and Dynamic Reservoir Modeling.
- > Does DBM have a role to play in geothermal energy exploration and mineral resources prospecting?
- > Advances in Reservoir Modeling for Carbon Capture, Utilization, and Storage: From Characterization to Monitoring and Verification.

### TARGET AUDIENCE

Professionals from various disciplines, including geology, geophysicist, reservoir modeling, and data science, with a foundation in Decision-Based Modeling (DBM), constitute our primary audience. Participants can expect to expand their knowledge in Artificial Intelligence (AI) and Machine Learning (ML) and their applications in reservoir modeling, especially regarding their value in enhancing DBM and advancing toward the realization of the Live Earth Model (LEM) vision.

## WORKSHOP GUIDELINES
